

Job Title: Senior Java Software Developer

We are currently recruiting for a Senior Level Software Engineer to join our London office to lead and work with our existing development team.

Location: This is a hybrid role with 50% split between London city office and remote. Candidate must be currently residing in the UK and willing to commute to the London office regularly. Current hybrid schedule is alternating between 3 or 2 days in the office.

Candidate Requirements

Candidate should have at least 7+ years Java full stack software development experience and excellent familiarity with REACT.

A BSc or MSc in computer science or related field is highly desirable but less so than relevant experience.

Flexibility to work on both legacy projects and developing new and future products using up to date methodologies and technologies.

Candidate will be working on both Frontend and backend projects and APIs.

Excellent communication skills essential as occasional client liaison will be required.

Main duties will include

- Work with existing codebases to add functionality and resolve issues including legacy and modern tech stacks.
- Candidate will be working on legacy projects written in native Java and JSP so must be comfortable writing code without a framework.
- Candidate will be working on modern projects using frameworks including Springboot and React.js
- Work on all parts of the development life cycle from analysis to maintenance
- Write clean code and be able to debug and resolve issues.
- Work alongside project managers and other stakeholders to enhance existing products and creating new IP.

Required Skills

- Java 8/11/17

- Springboot
- MySQL 8
- React
- Node.js

Optional Skills

- AWS - EC2, RDS, ELB
- LLMs and AI integration
- Experience with SOAP APIs
- RESTful services

Salary: TBC depending on experience
